PROFESSIONAL SUMMARY

Full-Stack Developer with hands-on experience architecting and building scalable, production-grade web applications and microservices end to end. Skilled across modern front-end frameworks (React, Next.js) and back-end stacks (Node.js, Express.js, Nest.js, Python/FastAPI), with deep experience designing RESTful APIs, relational and NoSQL databases, and cloud infrastructure on AWS. Proven track record owning full architecture on a multi-vendor e-commerce platform from database design and API development through deployment and CI/CD while integrating AI-driven features, automation, optimizing performance, and collaborating closely with cross-functional, fully remote teams.

CORE TECHNICAL SKILLS

Front-End: React, Next.js, TypeScript, JavaScript, responsive UI development

Back-End: Node.js, Express.js, Nest.js, Python, FastAPI, REST APIs, WebSockets/Socket.IO

Databases: PostgreSQL, MySQL, MongoDB, SQL Server, Firebase

Cloud & DevOps: AWS (Bedrock, Textract, S3, Lambda, Cognito, Amplify), Docker, CI/CD, GitHub Actions

Architecture & Practices: Microservices, API design, performance & query optimization, code review, scalable system design

AI/LLM Integration: LLM integration, retrieval-augmented generation (RAG), prompt design, AI-assisted automation

PROFESSIONAL EXPERIENCE

Software Developer I | LantroTech *Oct 2025 – Present*

- Contribute across the full stack (front-end and back-end) for Blue Ocean, a production-grade platform built for a US-based client, working with Python, FastAPI, PostgreSQL, Next.js, TypeScript, Node.js, REST APIs, and WebSockets.
- Design and ship end-to-end features spanning API development, database work, and UI implementation, collaborating with cross-functional teams across the software development lifecycle.
- Support a radiological software platform pairing a web application with a Java desktop application, alongside 6+ additional client projects, maintaining code quality across parallel codebases.
- Built RAG-oriented workflows for retrieving information from sensitive contracts and documents, with a focus on context-grounded, secure access.
- Designed prompts and chunking/context-building strategies for an AI-based schedule generation feature.

Full Stack Developer - Team Lead (Contract) | Gemelli Marketplace *Feb 2026 – Sep 2026*

- Architected and built a multi-vendor e-commerce platform from the ground up owning full-stack development, database design, AWS storage/integrations, CI/CD, and deployment.
- Built seller APIs, campaign tools, product promotion features, and a multilingual CMS to support platform scalability and growth.
- Implemented AI-driven automation for product verification and KYC OCR, along with review moderation and content management workflows.
- Built real-time communication features and an AI-assisted ticketing workflow to support customer service operations.
- Integrated third-party services and optimized backend performance and reliability across a production platform.

Associate Software Engineer | Ilmiversity *Aug 2025 – Oct 2025*

- Contributed to a multi-tenant learning management system serving multiple schools, delivering two major features across web and mobile-connected workflows.

Full-Stack Developer Intern | TechXServe *Aug 2024 – Oct 2024*

- Built core front-end and back-end foundations for a B2B e-commerce platform, including authentication, role-based workflows, product management, APIs, and CI/CD automation.

SELECTED PROJECTS

Multi-Vendor E-Commerce Platform | Gemelli Marketplace

- End-to-end architecture and development: full-stack build, seller/vendor APIs, AWS storage, CI/CD, and deployment for a production marketplace.

- Stack: Node.js, Python, AWS (S3, Textract), PostgreSQL, REST APIs.

RAG-Based Sensitive Document Retrieval | LantroTech

- Built a retrieval-augmented generation workflow to surface information from sensitive client contracts, keeping responses grounded in source text.
- Stack: Python, FastAPI, PostgreSQL, LLM integration.

AI-Powered KYC & Product Verification Automation | Gemelli Marketplace

- Built an OCR-based pipeline for identity and product document checks, automating verification to cut manual review during vendor onboarding.
- Stack: Python, OCR, AWS (S3, Textract), PostgreSQL.

EDUCATION

B.S. Computer Science | FAST NUCES, Islamabad 2021 – 2025

Relevant coursework: Artificial Intelligence, Deep Learning, Machine Learning Operations, Statistical Modelling, Cloud Computing, Database Systems, Software Engineering.

CERTIFICATIONS & AWARDS

- AWS Academy Cloud Foundations
- AWS Academy Cloud Data Pipeline Builder
- AWS Academy Cloud Web Application Builder
- Dean's List Award, FAST NUCES
